

Vehicle Home

Thanks to its state-of-the-art technology, the B-Class Electric Drive is not just sustainable and agile, but also networked. For example, the Vehicle Homepage allows convenient remote interrogation and remote configuration of the vehicle. The driver can use their PC or smartphone to conveniently access the vehicle via the internet. It is possible, for instance, to ascertain the current state of charge of the lithium-ion battery or to show the vehicle's current range on a map. In addition, the planned route can be displayed, showing at a glance where the vehicle can be recharged along the way, should this prove necessary. The range of connected services is rounded off by a feature that allows individually timed pre-heating or cooling of the vehicle. This pre-entry climate control system makes the B-Class Electric Drive unique in its segment.

Possible features in the future

- Enhanced Remote Configuration: "Personalizer" for Mercedes-Benz app, remote Door-lock/Unlock)
- Social Comparison (ECO-Challenge)
- Smart Vehicle Stats
- Enhanced Map visualizations
- Available on additional devices Smartwatch and Google Glass
